Notes

- Unless stated otherwise, all specifications apply to: the peak of the tuning curve; ambient temperature change of < +2°C; after 30-minute warm-up; provided the pump laser is operated at its nominal rated output power & meets its published specifications; & provided SolsTiS is not operated on or near strong atmospheric absorption lines without purge.
- Unique integrated pump packages are available for models up to SolsTiS 3500, intermediate output power levels available
- Other custom tuning ranges are available - please inquire for specific wavelengths.
- All ranges available with 'dial a wavelength' and high precision wavemeter control option
- RMS values. Linewidth specification applies relative to reference cavity and also absolute linewidth. Relative linewidth measured indefinitely and absolute linewidth measured over a period of 100µsec.
- SRX and PSX models only. Typical 25GHz scan < 0.1 seconds. Terascan option for narrow linewidth scan of full wavelength range.
- Laser head only. Includes reference cavity. Excludes Pump Optics Module, baseplate used with integrated pump lasers, or riser blocks in configuration using separate pump.
